Potential competing interests: No potential competing interests to declare.

I congratulate the author, who has reviewed research related to metacognition. As we know, metacognitive knowledge and learning have long been developed. to be able to measure with precision the effectiveness is not enough when we are based on descriptive research. It will be more in-depth if this research becomes the basis for development research (RnD) which is then tried to be implemented to see the effectiveness of the learning steps offered by the author.

However, we must examine this descriptive research that examines the basic theories related to metacognition. the library sources used are relatively old and have not been able to reveal the application of metacognition in a contemporary perspective.
