Autologous Glioma Cell Lysate

National Cancer Institute

Source

National Cancer Institute. *Autologous Glioma Cell Lysate*. NCI Thesaurus. Code C105810.

A cell lysate derived from glioma cells with potential immunostimulatory and antineoplastic activities. Upon intradermal administration, the autologous glioma cell lysate exposes the immune system to an undefined amount of glioma-type tumor associated antigens (TAA), which may result in the induction of both specific anti-tumoral cytotoxic T lymphocytes (CTL) and antibody-dependent responses against the glioma TAA-expressing cells, resulting in glioma cell lysis.
