Potential competing interests: No potential competing interests to declare.

Thank you for considering me to review this publication. The content of the research was very good, but the author should focus on the below points:

1. Characterisation of the Schiff base using ^1H NMR and IR data is not enough. You should have done ^{13}C NMR and Mass spectra.
2. For metal complexes, the author should have done Mass and UV spectra.
3. The geometry of the complexes was not provided.
4. You should have mentioned the reason for the higher activity of the particular complexes.
