

## Review of: "Saponins and their synergistic antibacterial activity with traditional antibiotics against Staphylococcus aureus and Escherichia coli: Review"

H. N. K. Al-Salman<sup>1</sup>

1 Basrah University

Potential competing interests: No potential competing interests to declare.

## Minor Revision:

- 1. The researcher did not know drug A and drug B.
- 2. Who is the antibiotic and who is the saponin?
- 3. Are the isolates used local (Noval) or source (Reference)?
- 4. CDC do not write abbreviated in the sources.
- 5. Reference No. 35 did not mention the names of the researchers.

## Major Revisions

- 1. It is noted that the synergy of saponin with the antibiotic has no effect on MRSA on any antibiotic-resistant bacteria, while the aim of the research was the cause of the spread of antibiotic-resistant bacteria.
- 2. The researcher should study the effectiveness of all antibiotics with saponin against MRSA.
- 3. What is the concentration of antibiotics used and the concentration of saponins used against *S. aureus*. and *E.coli*, did the researcher use the same concentrations.
