Thank you for sharing the manuscript "Application and Pathway: Regulation of Traditional Chinese Medicine in Lung Cancer Treatment".

Application and organization of traditional Chinese medicine in treating lung cancer: This is a useful review article that gives new ideas related to lung cancer and its treatment using natural resources away from the harmful effects of traditional chemical medicines on the body's organs.

There is no doubt that the article touched on new strategies that could be added to cancer research. However, I believe that it needs to be updated in some of its aspects.

It focused on treating cancer through the NF- κ B pathway and did not address Astragalus polysaccharide with other related research data.

The researcher mentioned that Chinese medicine enhances immunity, but he did not discuss much research evidence or provide examples, and the article does not contain a representation supported by pictures or tables.

I think the article needs a spelling and grammar review.

My regards
