Potential competing interests: No potential competing interests to declare.

This article is important for understanding exercise-induced rhabdomyolysis resulting in acute kidney injury (AKI).

Please note the following points for revision:

1. Reference 7 is mistakenly cited as a superscript three times in the article; this needs correction.
2. Figures 3 and 4 lack clear resolution and require enhancement.
3. It is crucial to specify the exact timing of the proteomics analysis—whether it was conducted before or after dialysis.
4. If possible, please include the latest proteomic analysis of the patient conducted at least three months after full recovery.
5. The discussion section could be strengthened by incorporating previous studies related to proteomic analysis.

Thank you!
