**Potential competing interests:** No potential competing interests to declare.

The article provides a comprehensive overview of the research efforts in Mexico to combat the dengue pandemic. The scientific discussion on drugs such as Metformin, ezetimibe, and statins is both informative and insightful, offering a deeper understanding of their potential efficacy in reducing viral replication. The call for further research through in vivo studies indicates a forward-looking perspective, emphasizing the article's potential to shape future developments in dengue therapeutics. Altogether, I find the work insightful and I offer the following suggestions for improvement:

1. Consider expanding the abstract by a few more sentences to offer a more detailed overview of the study. This expansion can include brief insights into the key findings, and potential implications of the research.
2. The authors mentioned the acronym CINVESTAV. It would be beneficial to provide an expansion for CINVESTAV to enhance clarity for readers who may not be familiar with the institution. A brief explanation of CINVESTAV's role or focus within the context of the research would be valuable.

These elements

contribute significantly to the scholarly discourse on dengue, and I appreciate your dedication to advancing this crucial field.
