Potential competing interests: No potential competing interests to declare.

I was invited to review this manuscript titled "Breaking Stereotypes: Sectoral Varicocele Diagnosis Revolutionized by Doppler Ultrasound Advancements"

Comment 1

In general, the work seems good, and after major revision and some additions, it could be published.

Comment 2

Please write details of the Doppler device (country of manufacture, type of the probe, and with which MHz) and describe the method of examination in detail, including the insonation angle, which parameters were recorded: diameter of the veins, pulsatility index, resistance index, time-averaged mean velocity,

Comment 3

The author should provide images of healthy and diseased persons. Could you add a table including the averages of values in the healthy and sick groups?

In general, the paper writing seems good, but more paragraphs should be added.

Kind regards,

Hassan A. Hussein
