**Potential competing interests:** No potential competing interests to declare.

Indeed, this is a very important study to conduct, especially for secondary school children.

It would be more appropriate if the author could describe the background of the study, literature review on the related file, methodology, data collection in detail, ethical approval, the data analysis process, and discussion with previous literature findings instead of describing only the instrument and findings in detail. Moreover, there are no citations found in the text, yet the author listed the references list at the end.
