My comments on the manuscript entitled "Hepatoprotective Effect of the Ursolic Acid-Oleanolic Acid Mixture Administered Intragastrically in Mice with Liver Damage Induced by Anti-TB Drugs" are as follows.

1. While it is essential for the abstract to provide a concise summary of the entire manuscript, the abstract serves as a brief overview of the research, highlighting key objectives, methods, results, and conclusions. Limitations and future prospects should also be written in the last line of this section.
2. Certainly, I understand the need for conciseness in the introduction section of a manuscript. Let's streamline the introduction by focusing on the major objectives, approaches, and the novelty of the study with appropriate justification.
3. How did you standardize the dose of Ursolic and Oleanolic acid?
4. Similar problems are found in the method and material section; concise it.
5. The Results and Discussion sections will be presented sequentially, with careful attention to eliminating any redundant information or repetition within this part of the manuscript.
6. Improving coherence is necessary in the discussion section of your manuscript. It is essential to establish a clear connection between your findings and the recent articles published in the field.
7. Ensure to incorporate a discussion on limitations and future prospects in the conclusion section of your manuscript. Addressing the constraints of the study and outlining potential avenues for future research will enhance the overall completeness of your conclusion.
8. The overall writing and presentation of the manuscript exhibit significant grammatical errors and lack clarity in certain areas. Substantial revision is necessary to enhance the quality of the manuscript. Further clarification is needed in specific sections to improve coherence and overall readability.
09. Provide 4x, 10x, and other higher magnification images of all the histology images and improve the resolution and clarity of the same.
10. Numerous grammatical and punctuation mistakes are evident throughout your entire manuscript.

11. The entire manuscript requires comprehensive editorial checking for grammar, punctuation, and overall clarity.
12. It seems like you're requesting someone to submit certain documents with a revised manuscript. If you are working on a document and need an English editing certificate and a plagiarism checker report, you can obtain the editing certificate from a professional editing service, and most plagiarism checkers provide downloadable reports. Make sure to follow the specific guidelines or requirements provided by the entity requesting these documents.
13. Include some relevant bibliographic studies based on the therapeutic impact of Ursolic acid and chlorogenic acid, like PMID: 36814486, PMID: 32787765, PMID: 32566093, PMID: 31016688, PMID: 30127737, & PMID: 26686287, in your manuscript.
