Potential competing interests: No potential competing interests to declare.

What methodologies were employed to gather and analyze the data presented in the article, and how do these methodologies affect the reliability and generalizability of the findings?

Given the extensive list of potential side effects and adverse reactions associated with psychotropic drugs in the elderly population, how do the authors suggest balancing the need for medication with the risks involved, especially in end-of-life care scenarios?

The article suggests a significant increase in psychotropic drug use among the elderly population over recent decades. What factors do the authors attribute to this rise, and are there any potential societal or systemic changes that could help mitigate this trend?

Are there any considerations given to cultural or socio-economic factors that may influence the prescribing and usage patterns of psychotropic drugs among elderly populations, both globally and within specific regions?

The author could offer more specific recommendations for future research directions to guide researchers in addressing the gaps.

A more balanced discussion that acknowledges the complexities of prescribing decisions and the need for individualized care would strengthen the argument.
