Reviewer's comment

Thank you for finding me worthy of reviewing this article. Here are my comments

Section 1.2

The authors need to explain how inadequate sewage disposal promotes antibiotic resistance.

Section 1.3

S aureus, *E coli* should be written in full for the first time

Methods

Much work has been done on the topic, I will suggest that the authors should consider other databases such as google scholar, Scopus and Science Direct for more robust findings.

Table 1 should have references to where the information was obtained.

6. Antibiotic resistance strains

S. aureus should be written in full. The mistake of abbreviating bacteria's name was repeated severally in this article and should be corrected accordingly.

In general, the article needs a major revision considering the above-mentioned suggestions, especially the method section. Also, the authors should consider the synergistic activity of the selected plants.
