Potential competing interests: No potential competing interests to declare.

Writing references in the abstract section is not expected since most ideas derive from our research findings. In this sense, ideas from Prasad (2022) should not be stated in the abstract section. Another point is that the reference section needs to list Taffler and Agrawal (2007). On the contrary, Taffler (1982) is not mentioned in the main paper body.

Given that the Altman Z-Score is a relatively straightforward model, it would be beneficial to provide a more detailed analysis rather than simply showing the calculations' results. The data presentation would enhance the reader's understanding of the research and its implications.

The conclusions section could be more extensive. More managerial implications and future research should be depicted.
