This is a very interesting article because the issue explored is very important in terms of wellbeing of fragile population.

The paper is very well organised, easy to read and cover interest to a wide community of scholar.

My only main concern regard Figure 3: I do not find in the text how air temperature was calculated. If the author wishes to let the reader to find it in the bibliography, I suggest to clearly report which parameterisation was utilised, in order to have a more clear view about the findings.
