The review entitled "A Comprehensive Overview on Pharmacological and Therapeutic Insights of *Solanum nigrum* Linn" summarizes the data encountered in literature regarding the importance, phytochemistry, and pharmacology of *Solanum nigrum* . I have some comments on this review.

Primarily, by reviewing literature, the phytochemistry, and pharmacology of *Solanum nigrum* have been already published, what is novelty of this study?

I think the authors should mention why they have conducted this study and what is the new add-ons compared to the previously published data.

The authors should describe the aim of this work as this point is not clear.

The introduction part is very short and missed a lot of information regarding the study objectives, importance, chemical and biological data about *Solanum nigrum.*

The plant name "*Solanum nigrum*" shall be italic whenever mentioned in the manuscript.

Please unify the drawing of chemical structures throughout the manuscript.

From my point of view, the pharmacological data mentioned in the manuscript should be written in a coherent manner not in separated paragraphs.
