Dr. Halilou Oumarou

The article deals with a topical issue, even if similar work has already been carried out. A scientific contribution on 3 legumes ecophysiology is done.

Nevertheless, there are a few minor typos that need to be corrected to improve the quality of the work:

I invite the author to consider the following aspects:

- uniformize bibliographical references, e.g. al after the author is always followed by a period "al." etc...
- point 2.3 **Physicochemical Properties of Collected Samples**: please avoid too much literature and get straight to the point, explaining how the samples were collected and analyzed. Otherwise, it seems like a discussion.
- you'll find some input (suggestion) in the text, I start my review on the last version I find.
- Most of my comments have been taken on board by previous reviewers.

These minor corrections do not detract from the quality of this paper.
