Review of: "An Improved Hybrid Transfer Learning-Based Deep Learning Model for Alzheimer's Disease Detection Using CT and MRI Scans"

Suresh P

Potential competing interests: No potential competing interests to declare.

1. The research contributions of the paper should be articulated more clearly. The abstract is not representative of the content and contributions of the paper. The abstract does not seem to properly convey the rigor of research.

2. For readers to quickly catch your contribution, it would be better to highlight major difficulties and challenges, and your original achievements to overcome them, in a clearer way in abstract and introduction.

3. Table 1 is too general. No inference is made from the table. Table 1 need to be refined in a clear way.

4. Pictures are not clear and professional. Need to be changed.

5. Some assumptions are stated in various sections. Justifications should be provided on these assumptions. Evaluation on how they will affect the results should be made.

6. The authors should explicitly state the novel contribution of this work, the similarities and the differences of this work with their previous publications.

7. Proposed methodology is not explained clearly. Lack of information.

8. The reason for using specific analysis is not clearly mentioned. Justification for using a specific methodology or instrument will make it more understandable. Adding more details in this section can give more clarity to the readers
