i read the manuscript and i like the idea of the search. i have few comments.

1-some long sentences are preferable to be divided into short ones

2-the result of comparing the use of UA/OA with that of sil is not clear for me (why to use the mixture if the sil has the same effect or better which is also a natural product) please explain

3-the extraction method in obtention of UA/OA mixture need to be rephrased in order to be obvious to the reader
