**Potential competing interests:** No potential competing interests to declare.

- The article is quite long. Reading and comprehension rates are decreasing.
- It would be appropriate to revise the article. Within the scope of the revision, it would be appropriate to compile some titles and gather them under a single title. The title name can be "Conceptual Framework."
- A figure containing the systematic steps of the study should be added, but before this is done, it would be good if it were decided whether the study has systematic steps.
- The method, application, and findings of the study should be clearly presented step by step.
- In the discussion section, the whole study should be discussed in general. Its contribution to literature and practice should be clearly defended.
