**Potential competing interests:** No potential competing interests to declare.

The article presents a very interesting problem. Ethically, there is no problem. The quality is adequate with a vast bibliography but the bibliography is not in alphabetical order, which is not acceptable. The research hypothesis is appropriate, clear, specific and till a certain point testable. The results is valid, and explained in a clear and logical way. The conclusions are supported by the results, and their implications are addressed. The impact can be greater if the issues are addressed in more detail. The examples shown in the text are underdeveloped, which makes the article less relevant than the introduction implies. The results are valid, but are not explained in a clear and logical way. The conclusions are supported by the results, and their implications should be addressed.
