Potential competing interests: No potential competing interests to declare.

The manuscript presents an extensive overview of sunlight exposure knowledge and practices among mothers attending PNC and immunization clinics at Debre Tabor Comprehensive Specialized Hospital (DTCSH) in Northwest Ethiopia. The study utilized a cross-sectional institutional-based design and a structured questionnaire to evaluate knowledge, practices, and associated factors concerning sunlight exposure among participants.

Please incorporate abbreviations (e.g., SNNPR, PNC, DTCSH, AOR, COR) following the defined protocol: upon first use, spell out the full term or phrase followed by its abbreviation in parentheses.

Additionally, for improved clarity in Table 1, consider including "years" after "mother's age" within the variables list. Furthermore, the term "Family size" might benefit from clarification by rephrasing it as "Number of family members" for consistency and better understanding, both in this table and where appropriate elsewhere.

Regarding Table 2, it is suggested to use lowercase "n" instead of capital "N" in the variables list and maintain uniformity for improved readability and consistency throughout the manuscript.
