"Consumption of Beverage among Secondary and Intermediate Students in Riyadh Schools, Saudi Arabia: A Cross-Sectional Study" is very well written and fascinating but required some changes according to my point of view.

1. The study's primary goal is beverage consumption rather than water consumption; nonetheless, both the abstract and the introduction emphasise water consumption.
2. It is important to correlate beverage ingredients with WHO limits.
3. The section on materials and methods is clearly written and easy to understand. It is preferable to write the beverage names to indicate which is more consumed for better comprehension of consumptions.
4. The results and discussions are written properly as well.
5. More recent references should be included.
6. You should examine the plagiarism report.
