Potential competing interests: No potential competing interests to declare.

This manuscript aimed at providing an overview about the diagnosis and management of anorectal malformations in the setting of visible fistulas. The available literature to this topic is limited, thus the rationale behind a comprehensive review is well understood. The narrative nature of this manuscript is rather a limitation to its novelty. The manuscript may be more comprehensive in its presentation and may benefit from minor language editing. I personally miss a systematic search and review of the current literature on this topic.
