

# Review of: "Multivariate Time-Series Data Generation in Generative Adversarial Networks"

Kunal Khadilkar

Potential competing interests: No potential competing interests to declare.

1. More elaboration regarding the innovation in the proposed model/algorithm would help in better understanding the manuscript
2. There are a few vague statements for eg. "We picked a batch size of 32 due to stability in results" More explanation should be given to such statements.
3. A visualization or graphical interpretation of the results will be useful in understanding the efficacy of the algorithm
4. Related work section needs to be detailed and should follow a proper format.
