

# Review of: "The symptomatic expression of infection with the Omicron variant in Chinese patients; findings from the Clifical COVID-19 clinical case registry"

Jan Mohammad Mir

**Potential competing interests:** The author(s) declared that no potential competing interests exist.

1. Background of the study is not clear enough. Critics and motivation must be redesigned.
2. Introduction is having very less referencing/bibliography and the direction should be more motivational.
3. The section devoted to "Material and Methods" needs an instant and careful revision. It is full of confusion to relate conceptual and mathematical formulations.
4. Language is not of the scientific standard.
5. Re-organization is suggested throughout the manuscript highlighting the main findings.
6. Comparative analysis for reported literature must be expanded.
