Hot water reflex epilepsy

INSERM

Source

INSERM. (1999). Orphanet: an online rare disease and orphan drug data base. Hot water reflex epilepsy. ORPHA:166412

Hot water reflex epilepsy is a rare neurologic disease characterized by the onset of generalized or focal seizures following immersion of the head in hot water, or with hot water being poured over the head. Primary generalized tonic-clonic seizures have been reported in rare cases.
