Comments

1. Please write about RAS gene using the following reference (<https://link.springer.com/article/10.1007/s12010-019-03119-6>)
2. I suggest to authors to list all the mutations present in RAS genes (KRAS, NRAS and BRAF)
3. Conclusion is not clear. I don't understand what authors want to summarise from this communication study. Please rewrite the conclusion.
