**Potential competing interests:** No potential competing interests to declare.

This study employs the FDM and AHP methods to produce a Toys Suitability Index Instrument. The article is readable and easy to understand. There are several questions or suggestions for this paper.

Firstly, the existing literature review should be added to the introduction or add one more section, which could help this paper to describe the contribution of the research.

Secondly, the FDM and AHP are utilized in this paper. The author should further explain why these two methods are chosen and discuss whether these methods are appropriate.

Thirdly, the author should further verify the effectiveness of the proposed index and evaluation method.

Finally, the conclusion and contribution should be more specific at the end of the manuscript.
