Potential competing interests: No potential competing interests to declare.

Comments:

- It's unclear why the focus is solely on "Industrial Wastewater Treatment." Expanding the scope to encompass other forms of wastewater treatment could provide a more comprehensive perspective.
- Section 3.1's formatting needs refinement to enhance readability and comprehension.
- The text exhibits issues concerning the coherence of sentences, punctuation, and a lack of clarity in the way explanations are organized.
- The authors should strive to diversify their list of references, avoiding over-reliance on the same sources to strengthen the paper's foundation.
