Considering the neglect of fire safety aspects in university education related to architectural design, I believe that your research has made a very important contribution. The overall structure of this study was also logically organized. I'd like to give you some suggestions if I can help you with your research. First, if you present the specific problems that have arisen because fire safety has been neglected in the field of architectural design education in the introduction, I believe that the need for this study will be highlighted. Second, it would be easier for readers to understand if the relevant contents of the National Building Code-2016 related to architectural design related education were presented in the theoretical background. Third, it would be nice if an investigation was conducted to find out which part of the design process helped students through these educational contents. For example, architectural planning concepts, drawing of floor plans, and selection of finishing materials, etc. Thank you for your efforts in conducting a very interesting study.
