# FNTA wt Allele

National Cancer Institute

## Source

National Cancer Institute. *FNTA wt Allele*. NCI Thesaurus. Code C52032.

Human FNTA wild-type allele is located within 8p22-q11 and is approximately 29 kb in length. This allele, which encodes protein farnesyltransferase/geranylgeranyltransferase type I alpha subunit protein, is involved in the post-translational modification of certain proteins via the addition of either a farnesyl group or geranylgeranyl group.
