# Gallbladder Mucinous Cystic Neoplasm

National Cancer Institute

## Source

National Cancer Institute. *Gallbladder Mucinous Cystic Neoplasm*. NCI Thesaurus. Code C96881.

An epithelial, usually multiloculated neoplasm arising from the gallbladder. It occurs predominantly in females. Signs and symptoms include abdominal mass, abdominal pain, and jaundice. Morphologically, the cystic spaces are lined by columnar epithelium and contain mucinous or serous fluid.
