

# Review of: "Corrections of Common Errors in Current Theories of Microwave Absorption Caused by Confusing Film and Material"

Jianwei Zhang

Potential competing interests: No potential competing interests to declare.

In this work,  $Z_{in}$  and  $Z_m$  for the material and film were discussed to correct common errors in current research. This work is meaningful and interesting. Before its publication, however, some minor interesting phenomena should be discussed.

1. The author should provide a more detailed explanation of the concepts of film and material before discussion.
2. The author should compare  $Z_{in}$  and  $Z_m$  of two or three films to visually demonstrate the current errors.
3. The conclusion part is similar to the abstract. The author should emphasize the significance of the research in the conclusion part.
