

# Review of: "Somatostatin and the pathophysiology of Alzheimer's disease"

Samjhana Pradhan

Potential competing interests: No potential competing interests to declare.

1. In the review, " Somatostatin and the pathophysiology of Alzheimer's disease", the author has presented a somatostatin model in AD etiology. In this regard, the Conclusion section lacks a conclusive remark. The author should put key/major points of somatostatin in AD pathophysiology to make the context of his/her review paper clear.
2. The review paper is incoherent and needs extensive editing.
3. The author, if possible, should also present pharmacological intervention with the somatostatin model for AD etiology.
4. The author should consider including these recent articles;[10.3390/ijms22168434](https://doi.org/10.3390/ijms22168434), [10.1186/s40035-022-00300-6](https://doi.org/10.1186/s40035-022-00300-6) and [10.1038/s41380-021-01368-8](https://doi.org/10.1038/s41380-021-01368-8), in the review paper.
