MDRD Enzymatic Formula

National Cancer Institute

Source

National Cancer Institute. MDRD Enzymatic Formula. NCI Thesaurus. Code C161346.

A formula to estimate glomerular filtration rate that takes into account age, sex, race, and serum creatinine. $eGFR \text{ (mL/min/1.73 m}^2\text{)} = 175 \times (\text{serum Cr [conv mg/dL]})^{-1.154} \times (\text{Age})^{-0.203} \times (0.742 \text{ if female}) \times (1.212 \text{ if black})$, for conventional units. $eGFR = 175 \times (\text{serum Cr [SI UMOL/L]}/88.4)^{-1.154} \times (\text{Age})^{-0.203} \times (0.742 \text{ if female}) \times (1.212 \text{ if black})$, for SI units. (Levey AS, Stevens LA, Schmid CH, Zhang YL, Castro AF, 3rd, Feldman HI, et al. A new equation to estimate glomerular filtration rate. Ann Intern Med. 2009;150(9):604-12.)
