

Review of: "Grid-secluded Induction Generator with ANN and Intreval Type-2 Fuzzy based Controller for Wind Power Generation with Smart Load Control"

Sumangal Bhaumik

Potential competing interests: No potential competing interests to declare.

1. The D-Q axes are presented in Figure 1, despite the author's claim that they are in Figures 2(a) and (b) of the analogous circuit in the Proposed Generation Scheme and its Modelling section.
2. The offered mathematical equations do not produce a continuous flow that satisfies the problem specifications.
3. The paper's organisation is really shoddy.
4. The specifications and characteristics for the generator and turbine are not specified by the author.
5. It is necessary to mention the experimentation's input circumstances.
6. Please update the hardware description with a figure and improve the algorithm part of the load control section's description.
7. The research's outcome analysis is of a medium level.
8. The research's concept is quite good.
