Potential competing interests: No potential competing interests to declare.

- In general, the content of the article is relevant and interesting. It analyzes in a very complete way the current water security situation in Hanoi, which can have a significant impact on the study area and can allow the competent authorities to make decisions based on reliable information.
- Regarding the structure of the article, it would be convenient to follow the usual order of research articles, that is: introduction, area of study, methodology, results and discussion, and then conclusion, and to add subheadings to each section for clarity. In particular, I consider that the use of so many subheadings in the introduction chapter can be avoided.
- It is suggested to consider the inclusion of graphs that enable the reader to have a better interpretation of the results obtained.
