Potential competing interests: No potential competing interests to declare.

1. This is an interesting topic, and it has certain practical significance to study the future of China's private economy.
2. The article did not use data for rigorous empirical analysis, only based on enterprise cases, and the reliability of its analysis results needs to be discussed.
3. The article lacks sufficient references to excellent journals such as core journals and authoritative journals. Most of the references come from the internet. Is it reliable to use these discussions to support the viewpoint?
4. What are the innovations of this article compared to previous literature?
5. Is the article hasty in drawing general conclusions from the narratives of entrepreneurs in terms of research methods?
6. I may disagree with some views and supporting arguments put forward by the author, but It is just different personal views. In addition, the issues raised by the author seem to exist not only in China.

These points may need to be reconsidered by the author.

Good luck!
