Intestinibacter bartlettii

National Cancer Institute

Source

National Cancer Institute. *Intestinibacter bartlettii*. NCI Thesaurus. Code C122324.

A species of obligately anaerobic, Gram-positive, rod-shaped, non-motile, spore-forming bacteria in the family Clostridiaceae. *I. bartlettii* is negative for lecithinase, lipase, catalase and urease, and is unable to hydrolyze esculin or gelatin, or reduce nitrate to nitrite, but positive for acid phosphatase, galactosidase and beta-glucuronidase. The species was originally isolated from fecal samples.
