

Review of: "Mumps pneumonia in adults – a forgotten entity"

Muhammad Suleman Rana

Potential competing interests: No potential competing interests to declare.

The article is interesting and well written. In this article authors discussed very important and rare implications of Mumps virus. Mumps rarely cause pneumonia in Patients, however, the findings and investigation reported here are the suggestive of this rare cause as all pneumonia causing viral agents are rollout. It will be more clear if the author rollout the bacterial agents causing pneumonia.

There are minor grammatic errors in the text and needs to improve the English language of the manuscript draft before acceptance and publication.

This study will helpful for the understanding of complications caused by Mumps virus and patients management as well.
