

Review of: "Generalized N-metric Spaces"

Taihe Fan

Potential competing interests: No potential competing interests to declare.

In this paper, the concept of Generalized N-metric space is introduced, but only an example is investigated. No further properties of the concept is investigated. Also, the background for the concept is not strong. So, I think the paper can not be published in its present form. If the authors can give some basic properties of the concept like that in topology and give some clear motivations of the concept, then the paper could be published.
