Potential competing interests: No potential competing interests to declare.

I am pleased to read this study and I believe that it raises interesting insights. However, some minor issues should be solved before recommending its eventual publication.

In the introduction, there is a necessity to highlight other green technologies that can affect the transportation system by considering the role of information and communication technologies (ICT), smart and sustainable cities, and renewable energy as innovative technologies. It can be noted the capital importance of these technologies on environmental sustainability since they are widely recognized by the scientific community.

Some references below can help to understand the linkages in relation to transportation, energy efficiency, and environmental sustainability.
