

Review of: "Is Indian Costus Effective Against the SARS-CoV-2 Virus?"

Niketan Deshmukh

Potential competing interests: No potential competing interests to declare.

The quality of the article is substandard and does not meet expected standards. Nevertheless, I have generated several constructive comments that could potentially aid the authors in enhancing its quality. Here are the comments:

1. Article is too short to establish definitive conclusions.
2. The author should establish a correlation between the characteristics of the bioactive ingredient and its mechanism of action against SARS-CoV-2.
3. Further elucidation is required regarding the procedures for isolating and purifying these bioactive molecules from *Dolomiaea costus*
4. Support data with proper citations.
