Dear Authors,

You have done a commendable study that provides valuable insights into experiences of Medical Students during the COVID 19 global health crisis. However, the following have been noted for revisions:

1. Acronyms like MBBS and BDS should be written in full at first use.
2. The period of conduct of the survey needs to be mentioned or included in both Abstract and Methodology sections.
3. Details included in Introduction and need not be repeated in the Discussions Section except when needed to drive home important point(s).
