Dear Editor,

Thank you for giving me the opportunity to review this publication. I have provided my comments as follows:

General comments:

This is an interesting manuscript and can be a potential project report for a software application. However, the paper could benefit from some revisions in order to reach publishable quality.

=============

Comments:

Overall, the authors should re-review the entire manuscript for clarity and consistency. The research is insufficiently integrated into the existing body of work due to the absence of a thorough literature review. A detailed and well-structured review of relevant literature would enhance the study's clarity and foundational strength. Additionally, the Discussion section should include a comparison with established techniques to substantiate claims of superior performance.
