

Review of: "Evaluating the clinico-biochemical association between stress and chronic periodontitis by estimation of serum cortisol and serum chromogranin-A levels"

Enas Elgendy

Potential competing interests: No potential competing interests to declare.

1. The main idea of this project is not new.
2. Both the introduction and discussion are too long.
3. The authors used the old classification of periodontal diseases (Armitag 1999) , they should follow the new classification (Caton 2017, stages).
4. The number of ethical committee is not included.
5. There was no data about the methods of calculation of sample size.
6. The type of bacteria should be in the italic form (*Porphyromonas gingivalis*).
7. Table II includes on abbreviation (SRRS) the full name must be mentioned below the table.
