Dear Editor,

Greetings.

It is an honor for me to review the titled- **Technological Advancement and Changing Skills: Imperative for a Paradigm Shift in Education Delivery in Zambia**". The topic of this paper is critical and I think the outcome would be an interesting study for the readers. The authors did an extraordinary effort, but a few useful suggestions can improve the research write-up. The following points can be considered for the improvement of the paper before its acceptance for publication.

Major Revision

1. Author should include an extensive literature review and discussion in introduction part.
2. The author should incorporate practical implications, limitations, and future scope.
3. Current studies related to Technological Advancement and Changing Skills should be explored more in the literature review part to identify the research gap.
4. After major revision, the paper can fulfill the expectation of the target audience.
5. It would be better to incorporate practical implications along with academic outcomes.
6. Develop the conclusions section to include the unique contributions of the paper.
7. The language of the paper needs careful proof editing. The paper should be rejected if the case authors are not serious about the revision and the language of the paper.
