Potential competing interests: No potential competing interests to declare.

The authors discuss the novel topic of blockchain EV payment systems. Some questions are listed below:

1. The motivation for the research is not clear enough. How are blockchain EV payment systems different from other blockchain payment systems, and why should they be studied specifically?
- [2. The scope of the analysis should be expanded to include some recent papers. Some articles that I am aware of have not been included. In addition, the currently selected keywords may not cover all such articles, and the authors also need to consider some blockchain-based EV power trading solutions.
3. The quality of the picture needs to be improved. Some of the content is difficult to read.
