Potential competing interests: No potential competing interests to declare.

The article has surely addressed the issue of small-scale industries and derived very good suggestions. The article quality can be strengthened by incorporating the following suggestions:

1. The paper has a long reference list, but the references are not properly cited in the article, such as in the Introduction and Literature Review. Please cite the literature reviewed at the appropriate places.
2. The literature used for the review is too old. The article lacks the use of the latest literature. Please find suitable recent literature and incorporate the same.
3. "H02: The sources of raw materials for bakeries have a significant impact on the profitability of bakeries." The testing of the second hypothesis is missing or unclear.
4. The article is missing the numbers and captions of all tables and figures. Thus, it is difficult to visualize the results displayed in the figures for readers.
