

Review of: "[Mini-review] The Global Impact and Management of Foodborne RNA Viruses"

Ioana Boeras

Potential competing interests: No potential competing interests to declare.

This mini-review on foodborne RNA viruses is informative and covers most aspects related to virus biology and their impact on human health. Although at first glance the review seems superficial, without going into depth on any aspect, I assume this is a result of the mini-review format, which limits the author to the amount of information that can be presented. Therefore, this is a great review for someone who is new to the field and only needs to get an idea of the aspects that need to be taken into account; however, someone with knowledge in the field would not have much to learn from it.
